## An update on Dome A Astronomy

*Tuesday, 19 September 2023 14:00 (30 minutes)*

The 39th CHINARE returned to Dome A after four years. We maintained the site testing instruments, including seeing monitor KL-DIMM, all-sky camera KLCAM, and multi-layer weather station KLAWS-2G. PLATO-A and the main control and data system for instruments were also serviced. All the unattended instruments are working well and collecting data. We will summarize the field work related to astronomy and discuss a future plan for the site, including how to deal with the snow accumulation. New results will also be reported.
