SCAR AAA WORKSHOP
September 15-19, 2025
PHUKET, THAILAND

Your colleagues' and your own responses regarding these points are highly appreciated.

- 1) In the context of the preparation for the next IPY. I would like to know your vision for the IPY 5.
- 2) What would you like to be addressed, key priorities, additional ideas, or opportunities you believe should be highlighted in the coming years? i.e. Flagship projects.
- 3) What are the scientific questions that should be updated from the previous 2015 horizon scan? What "new" questions arose, which ones were already answered?
- 4) What are the values you would like to be reflected in the IPY?
- 5) What are the top two, three, four, or five things that participants would want out of an IPY?
- 6) How can the committee ensure that the IPY is relevant to non-polar communities?

The Fifth International Polar Year (IPY-5)

IPY-5 in 2032-33 aims to address urgent global challenges by advancing polar research, focusing on the impacts of climate change in the Arctic and Antarctic. This coordinated effort will bring together scientists, Indigenous knowledge holders, and global stakeholders to produce actionable insights for mitigating and adapting to environmental changes, while promoting international collaboration and inclusivity.
