The Planck Mission

Monday, 13 May 2013 09:45 (35 minutes)

The Planck Satellite, launched in 2009, has released a detailed set of maps of the temperature of the Cosmic Microwave Background radiation and measurements of cosmological parameters based on these data. I will review the results from this Planck data release and discuss future prospects for CMB measurements from Planck and the next generation of experiments.

Presenter: CHURCH, Sarah (Stanford University)

Session Classification: The Planck Mission
