Results from the Telescope Array Experiment

Monday, 13 May 2013 14:25 (25 minutes)

The Telescope Array (TA) is the largest experiment in the northern hemisphere studying ultrahigh energy cosmic rays. It is located in Utah, USA, and has been collecting data since 2008. Results will be presented on the spectrum of cosmic rays, their composition, searches for gamma ray and neutrino primaries, and searches for anisotropy in their arrival directions. In addition, new projects being undertaken by the TA collaboration will be described.

Primary authors: Prof. THOMSON, Gordon (University of Utah); Prof. SOKOLSKY, Pierre (University of Utah)

Presenters: Prof. THOMSON, Gordon (University of Utah); Prof. SOKOLSKY, Pierre (University of Utah)

Session Classification: Cosmic-Ray Theory / Experiments I

Track Classification: Cosmic Rays (Theory/Experiment) Parallel
