

Results from Telescope Array

Tuesday, 5 May 2015 10:00 (30 minutes)

I will present the latest results from Telescope Array including measurements of UHECR composition and anisotropy. I will present preliminary results at lower energies from TALE. Finally, I will present plans for TAx4 and for the Non-Imaging Cherenkov array (NICHE). NICHE and TALE provide the possibility of doing Cherenkov hybrid measurements in the energy region just above the Knee.
